

AMENDMENTS TO THE SPECIFICATION:

Please amend the indicated paragraphs of the specification in accordance with the amendments indicated below.

Page 4: eighth full paragraph ([0022] of published application), amend as follows:

Fig. 7 a view of FIG. 5 in the direction of the arrow VII in FIG. 5, ~~and~~

Page 4: following the last full paragraph beginning "Fig. 8 a view...", add the following:

Fig. 9 is a cross-sectional plan view along the line IX-IX in Fig. 5 with the slides and the rail foot of the rail being depicted by phantom lines; and

Fig. 10 is a detail elevation showing the height adjustment spindle supported on a U-shaped support rail.

Page 4: following the last paragraph of the specification on page 7, add the following:

As previously noted herein, it is deemed particularly advantageous if the support rails 30 are angled rails oriented opposite to one another with projecting bearing flanges 32 (upward projecting flange) for the height adjustment spindles 3, which prevents slipping off in the transverse direction, as depicted, for example, in Fig. 9. Also, as mentioned, U-shaped rails 30' having a pair of upward projecting flanges 32' could also be used, as shown, for example, in Fig. 10.
